In-Car PC Project

A Multidimensional In-Car PC!
Dedicated system enthusiast Terran Brown, intent on providing satellite navigation
successfully delivered that and more, including movie and music playing, Internet,
feedback. Terran has handpicked an array of hardware and software components, r
ensure that his project is among the snazziest creations around. Adding to the boar
touchscreen with adjustable positioning, low profile Morex 2688R chassis, an essen
source Media Engine software-allowing him to customize the interface of his system
navigation. Terran's website reveals his entire project with a diary section giving a l
descriptions of the various hardware and software components with his own ratings
a guest book section. Terran plans to extend his project to include traffic informatic
and various solid-state drives. Great work Terran!
